

SPOTLESS™ hc

Clean It Once and Be Done™

Flexible soil release agent for use in hydrocarbon systems.

Do you worry about problems from wet pre-spotting in hydrocarbon or petroleum solvent systems? Do you have concerns about contaminating your system with spotting agents that you've applied to remove soils? Do you want to improve soil removal and get fragile articles clean on the first try, even when using short running times? Do you want more cleaning power for heavily soiled classifications? Then you need the cleaning power and flexibility of SPOTLESS HC.

SPOTLESS HC is a flexible soil release agent that is fast, easy, and effective when used in any of three ways: as a pre-treatment, a stain removal agent, or as a batch additive. SPOTLESS HC provides the extra cleaning power you need to clean it once and be done, often by simply applying it to the soiled area and running in your normal cycle.

*Get it clean the first time with
SPOTLESS HC*

How SPOTLESS HC Can Help

- **Less Trouble than Re-Cleans.**
Re-cleans wreak havoc on your workflow and productivity. That's why it's important to get clothes clean on the first pass. Simply apply SPOTLESS HC on soiled areas before cleaning and watch your pass up percentage improve.
- **Less Time Consuming than Spotting**
Thoroughly flushing spotting chemicals to avoid odor build up can take time that you don't have. SPOTLESS HC has a fresh, clean fragrance and will not support bacterial growth. It's designed so that you can put it on and leave it on through the cleaning cycle, without flushing so that you have more time for other things.
- **Less Costly than Re-Cleans.**
Cleaning a garment twice costs twice as much as cleaning it once. Avoid extra handling for heavily soiled classifications by using SPOTLESS HC as a batch additive on the load to improve cleaning performance.
- **More Overall Soil Removal.**
Additions of SPOTLESS HC will boost cleaning power and aid in soil suspension. Regular use will give you cleaner clothes with less graying.
- **More Versatile.**
SPOTLESS HC can be sprayed, brushed on, applied with a spotting bottle, or added to the wheel to "Batch" a heavily soiled load.
- **Less Danger to Sensitive Fabrics.**
If Pre-Spotting with water has already been performed and the area dried with air, you can apply SPOTLESS HC to level the area and help prevent damage to fabrics or dyes from residual moisture.
- **Less Risky than Long Running Times.**
On fragile articles such as wedding gowns and articles with special trims, long running times to improve soil removal can risk damage to the garment. Pre-treat with SPOTLESS HC to make sure they come clean in short cycles.

THREE Easy Ways to Use SPOTLESS™ HC

To Remove Stains

Use at the spotting board to remove stains.

1. Apply SPOTLESS HC directly to the fabric and completely saturate stained area.
2. Work the stain with spatula or by tamping with a dry-side brush.
3. When soil is loosened or removed from fabric, continue with the drycleaning process. SPOTLESS HC is designed so that you can machine rinse spotted garments.

Please Note:

SPOTLESS HC is safe to fabrics and most colors. If color fastness is questionable, test garment in a hidden area.

To Control Moisture During Drycleaning (Leveling): The problems caused by drycleaning fabrics that contain moisture from pre-spotting can be overcome by using SPOTLESS HC. Using a technique called “leveling,” it works by controlling the moisture that remains from wet-side stain removal procedures after the spotted area has been rinsed and air-dried with the spotting gun.

Follow These Instructions:

1. After using any wetside stain remover AND after fabric has been rinsed and air dried with the spotting gun, apply SPOTLESS HC liberally to the pre-spotted areas. This will control residual moisture.
2. Do not flush, rinse or dry. Continue with the drycleaning process.

How to Order SPOTLESS HC

SPOTLESS HC is sold by authorized Street's distributors everywhere. Order from your distributor in single one-gallon containers or cases of four gallons.

Specially labeled SPOTLESS HC spotting and spray bottles are available.

To Pre-Treat Soiled Areas

SPOTLESS HC can be sprayed or brushed on to quickly cover larger areas.

1. Use the 32 oz. SPOTLESS HC spray bottle to apply full strength. Completely saturate the area needing treatment.
2. Areas of heavy soils such as hemlines and around pockets may require tamping.
3. Allow SPOTLESS HC several minutes to work, but do not allow to dry. Should product dry on fabric, simply re-wet with SPOTLESS HC.
4. Do not flush. Simply dryclean.

To Boost Cleaning Power as a Batch Additive

Add directly to the wheel for extremely soiled loads.

1. Using a graduated container such as a measuring cup or spotting bottle, make a solution of 5 parts SPOTLESS HC to 1 part water.
2. Add to the load at a ratio of 3-6 oz. per 10 lb. of load, depending on soil level.

Please Note: Do not add water to loads containing soft wools or cashmere.
